

TSD-100

4 Supervised Voltage Outputs Expansion Card

Description

The TSD-100 card has been designed to increase the number of conventional sounder outputs to DETNOV's CCD-100 range of conventional fire control panels. The TSD-100 card provides four supervised outputs for conventional sounders which may be used in order to carry out activations by zone in a conventional system. CCD-100 fire control panels are able to host up to three TSD-100 cards, obtaining a total of 12 additional conventional sounder outputs.

Features

- 4 supervised outputs for conventional sounders
- 3 modules per control panel

Technical features

Relays	Maximum load: 500 mA (maximum) for each output
	Delay: Selector from 0 to 10 minutes built in panel board
Environment	Operating temperature: From -5°C to +40°C
	Relative humidity: 95% without condensation
